

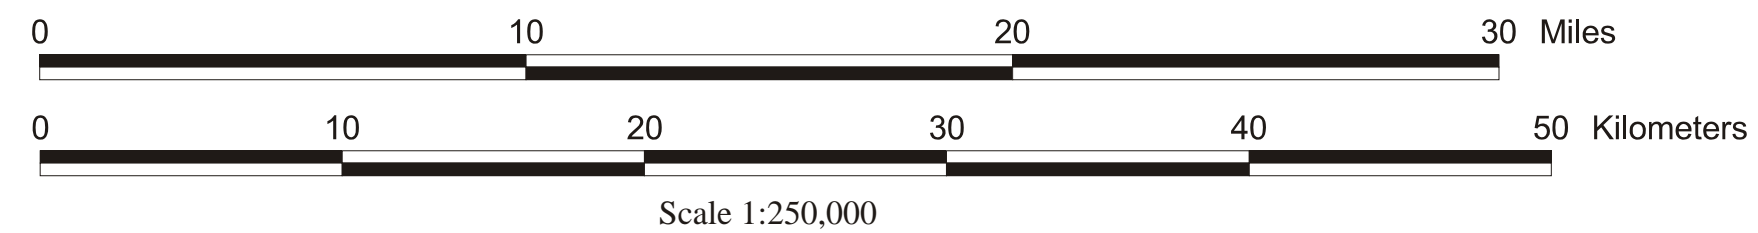

Figure 4. Map showing the elevation of the Coastal Plain unconformity, which is at the erosional surface of Upper Cretaceous strata. Outline of shoreline is shown for reference. Locations A and B indicate the locations of boomer seismic profiles (Fig. 5a,b). Inset above shows locations of onshore hydrographic wells (red dots) and the data points digitized from seismic profiles (black dots) used to model the surface elevation of the Coastal Plain unconformity.
